

## Long title: Template and instructions to the authors

Kostrobij P. P.<sup>1</sup>, Tokarchuk M. V.<sup>1,2</sup>, Markovych B. M.<sup>1</sup>

<sup>1</sup>*Lviv Polytechnic National University*

*12 S. Bandera str., 79013, Lviv, Ukraine*

<sup>2</sup>*Institute for Condensed Matter Physics  
of the National Academy of Sciences of Ukraine  
1 Svientsitskii str., 79011, Lviv, Ukraine*

(Received 1 April 2014)

These instructions describe how to prepare an article using L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\epsilon$</sub>  and MMC.sty for publishing in “Mathematical Modeling and Computing” journal. The prepared article should be sent to the e-mail: mmc@lpnu.ua. The abstract should be written as a single paragraph not exceeding 150 words.

**Keywords:** Up to six keywords

**2000 MSC:** Up to six 2000 MSC numbers

**UDC:** Up to six UDC numbers

### 1. The general structure of the file

Original text of the article in the L<sup>A</sup>T<sub>E</sub>X 2 <sub>$\epsilon$</sub>  format can be typed in any text editor.

The text should begin with the lines

```
\documentclass[11pt]{article}
\usepackage{MMC}
\begin{document}
```

Command \usepackage connects style file MMC.sty, which must be located in the same directory as the article.

After that the title, list of authors, their affiliation, links to grants (if required), e-mail of corresponding author, annotation, keywords, MSC and UDC number(s) are formed:

```
\title
[Short title: Template and instructions]
[Long title: Template and instructions
to the authors]

\author
[Kostrobij\_,P.\_,P.]
{ Kostrobij\_,P.\_,P.,
Tokarchuk\_,M.\_,V.,
Markovych\_,B.\_,M.}
[Kostrobij\_,P.\_,P.\$^1$,
Tokarchuk\_,M.\_,V.\$^{1,2}\$,
Markovych\_,B.\_,M.\$^1\$]

\thanks{This work was supported by grant \ldots}
\email{e-mail\_m@mail.org}

\BibTitle{Guide to \LaTeX.}
Addison-Wesley Professional;
4th edition (2003).

\bibitem{Goossens}
\BibAuthor{Goossens\., Rahtz\., S.}
\BibTitle{The \LaTeX\ Graphics Companion:
Illustrating Documents with TeX
and Postscript.}
Addison-Wesley Professional (1997).

\bibitem{Oetiker}
\BibUrl{http://ctan.org/tex-archive/info/lshort/}

\bibitem{Burnside}
\BibAuthor{Burnside\., W.}
\BibTitle{A rapidly convergent series
for  $\log N!$ }
Messenger Math. \textbf{46},
157--159 (1917).

\end{thebibliography}

```

The text concludes by commands `\maketitleUkr` and `\end{document}`

## 2. Standard tools of L<sup>A</sup>T<sub>E</sub>X

There is no particular restriction on the use of standard L<sup>A</sup>T<sub>E</sub>X tools [1, 2, 3, 4, 5]. You can insert in the article formulas, tables, lists, images, footnotes, etc. Link to the formula, literature, etc. should be carried out by the labels.

List of standard packages connected in `MMC.sty`: `algorithm`, `algorithmic`, `amssymb`, `amsmath`, `array`, `babel`, `balance`, `color`, `epic`, `euscript`, `graphicx`, `ifthen`, `inputenc`, `mathrsfs`, `pb-diagram`, `theorem`, `upgreek`, `url`, `xy`. These packages do not require you causing command `\usepackage`. Better to do only those packages.

Formula within the text, even very short, needed to be surrounded by dollar signs \$:	
<code>value \$-3.14\$</code>	value $-3.14$ — correctly
<code>value -3.14</code>	value $-3.14$ — wrong
<code>variable \$x\$</code>	variable $x$ — correctly
<code>variable x</code>	variable $x$ — wrong

Formula in line with no number surrounded by brackets `\[` and `\]`. Formula in line with number surround by commands `\begin{equation}` и `\end{equation}`.

Tables are created by environment `tabular` and executed as a floating environment using `table` (see Tabl. 1).

**Table 1.** This is a table template

Product	1	2	3	4
Price	124.-	136.-	85.-	156.-
Years	1	2	-	3
Rating	89%	84%	51%	
Recommended	yes	yes	no	no

Illustrations should be prepared in the format **EPS**. Pictures are inserted in the text as a floating environment using **figure** (see Fig. 1).

**Fig. 1.** Donald Knuth, creator of TeX.

References are made by environment **thebibliography**. Each entry begins bibliography command **\bibitem{name}**. Label *name* allows you to refer to this record by typing **\cite{name}**. In the references are allowed to specify multiple labels separated by commas: **\cite{name<sub>1</sub>,name<sub>2</sub>}**. New command **\citenb** provides a link without the square brackets that allows intervals; for example, [1–5] was obtained as follows: **[\citenb{Mittelbach}--\citenb{Oetiker}]**.

Algorithms are formed in the style of pseudo code using a floating environment **Algorithm**. Inside environment **Algorithm** standard keywords **\IF**, **\FOR**, **\WHILE**, etc are using. Steps of the algorithm are automatically numbered, and may be cited, See important step 5 algorithm 1.

---

**Algorithm 1** All commands are showed

---

**Require:**  $x, y$ ;  
**Ensure:**  $z = F(x, y)$ ;

- 1: initialization:  $b := a$ ;
- 2: **for**  $i = 1, \dots, n$
- 3:   **for all**  $w \in W$  such that  $w \geq 0$
- 4:     **repeat**
- 5:       important step: calculation of the vector  $u_i$ ;
- 6:     **until**  $\|u_i - u_{i-1}\| > \varepsilon$ ;
- 7: **if**  $a > 0$  **then**
- 8:   **while**  $W \neq \emptyset$
- 9:      $W := W - \{a\}$ ;
- 10: **else if**  $a = 0$  **then**
- 11:   **loop** // infinite loop
- 12:     under certain conditions **exit**;
- 13: **else** // at  $a < 0$
- 14:    $a := 1$ ;

---

List of environments: **Def** or **Definition**, **Theorem**, **Lemma**, **State**, **Corollary**, **Axiom**, **Problem**, **Example**, **Remark**, **Hypothesis**.

Using of these environments:

**Theorem 1.** It is statement of the theorem.

**Remark 1.** It is remark to theorem 1.

Complicated formulas require use environment `align`, `alignat`, `gather`, `multiline` или `split`.

**Example 1.**

$$H = H_0 + \sum_{j=1}^N V(\mathbf{r}_j) + \frac{1}{2} \int_V d\mathbf{R}_1 \int_V d\mathbf{R}_2 \frac{\varrho_1(\mathbf{R}_1)\varrho_1(\mathbf{R}_2) - (eN/V)^2}{|\mathbf{R}_1 - \mathbf{R}_2|} \\ + \frac{1}{2} \int_V d\mathbf{R}_1 \int_V d\mathbf{R}_2 \frac{\varrho(\mathbf{R}_1)\varrho(\mathbf{R}_2) - (eN/V)^2}{|\mathbf{R}_1 - \mathbf{R}_2|}, \quad (1)$$

**Example 2.**

$$R'_N(F) = \frac{1}{N} \sum_{i=1}^N \left( P(+1|x_i)C(+1, F(x_i)) + \right. \\ \left. + P(-1|x_i)C(-1, F(x_i)) \right).$$
